You Are Not Alone

Today, **1 in 4 Americans**, over 61 million people, live with a disability. At the same time, the world's population is aging. In the U.S., **over 57 million adults** are age 65 or older, and globally, that number exceeds 808 million. **By 2030**, older adults will outnumber children under 18 for the first time in U.S. history.

These shifts mean more people are facing challenges related to mobility, dexterity, energy, and daily self-care. If you or someone you love is experiencing this—you're not alone.

Disability is the only minority group that any of us can become part of — at any given time.

Dressing is simple...until it is not.

For millions, it's a daily struggle. Disabilities can be visible or invisible and take many forms — physical, cognitive, sensory, or speech-related. Conditions like arthritis, stroke, injury, or chronic illness can make basic tasks like fastening a shirt or buttoning pants difficult, painful, or impossible.

Adaptive Clothing Today

Adaptive clothing makes dressing easier and more independent. Many options use hook and loop fasteners (otherwise known as Velcro), magnets, zippers, and snaps.

The need is growing — and so are the possibilities.

As our population changes, the call for practical, inclusive clothing grows louder.

People deserve clothing that works with their bodies, not against them — apparel that restores comfort, confidence, and independence.
